

REQUIREMENTS FOR LETTER CONFIRMING WATER AVAILABILITY

- Lot Number (normally a letter-number designation)
- Copy of the property's Catastro and Consulta Finca to confirm ownership
- Name of Corporation if property is held in a Corporation
- Copy of Cedula Juridica (if it is held in a corporation)
- Copy of Passport or Cedula of legal owner or authorized signatory
- Power of Attorney if authorized signatory is not the owner nor an officer of the corporation
- Personaria Juridica dated within 30 days of application to confirm applicant is bona fide owner or representative of Corporation.
- Copy of building plans showing total area under roof and building footprint.
- Detailed drawing of waste treatment system to be built.
- Name of Project
- Amount of water required in liters per month

General Information Regarding Water Connections:

Before a water connection can be affected, a written agreement to build a holding tank with a check valve installed must be provided. For an average household, the tank should have a capacity of at least 1000 gallons.

Before a meter can be connected, culvert must be installed in drainage ditches to protect ASA Potrero water mains and to prevent flooding resulting from blocked drains. ASA Potrero will do a site inspection to determine where and if culvert is required.

Every new connection makes an impact on our water system and our environment. The impact is determined by the area of the property to be developed, the carrying capacity of the construction i.e. how many people it may house, the footprint of the building(s) and the area remaining to be landscaped.

Clearly, a multi-unit apartment building or condo complex will have a greater impact than a two-bedroom house. The impact for each individual connection is determined in a manner that is fair and equitable to all water users.

Note: The size of the meter(s) will be 1/2". ASA Potrero will not install any larger connections. Multiple 1/2 " connections will be installed as requested.
